Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence is identical to the preproIGF-IA sequence (X04480) except for the presence of a 52 bp insertion following codon 86 (position 397 to 448), caused by alternative RNA splicing. The B domain of IGF comprises residues 1-29 (position 139-225), the C domain residues 30-41 (position 226-261), the A domain residues 42-62 (position 262-324) and the D domain residues 63-70 (position 262-324)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bell,G.I., Stempien,M.M., Fong,N.M. and Rall,L.B:
Sequences of liver cDNAs encoding two different mouse insulin-like
growth factor I precursors

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 860
                                                                                                                                                              Kato,H., Okoshi,A., Miura,Y. and Noguchi,T. A new cDNA clone relating to larger molecular insulin-like growth factor-I mRNA Agric. Biol. Chem. 54 (6), 1599-1601 (1990) 91103966
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   61
                                                                                              The difference in the size of IGF-I mRNA has been suggested to be primarily due to differences in the 3'-untranslated region in [1]. The cDNA clone to IGF-I mRNA reported in [2] gives direct evidence for this hypothesis.
                                                                                                                                                                                                                                                          J. Biol.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to use of mechano-growth factor (MGF), CC an Insulin-like Growth Factor-I (IGF-I) isoform in the manufacture of a CC medicament for the treatment of neurological disorder. The MGF is capable of reducing motoneurone loss by 20% or greater in response to nerve avulsion, and effects motoneurone rescue, preferably adult motoneurone rescue. The MGF polynuclectide and polypeptide are useful in the manufacture of a medicament for the treatment of a neurological disorder, including a disorder of motoneurones and/or neurodegenerative disorder, cc e.g., amyotrophic lateral solerosis, spinal muscular atrophy, progressive spinal muscular atrophy, infantile or juvenile muscular atrophy, progressive cc spinal muscular atrophy, infantile or juvenile muscular atrophy, cc poliomyelitis or post-polio syndrome, a disorder caused by exposure to a ctoxin, motoneurone trauma, a motoneurone lesion or nerve damage, an injury that affects motoneurones, motoneurone loss associated with aging, cautosomal or sex-linked muscular dystrophy, diabetic neuropathy, cc peripheral neuropathies, Allzheimer's disease and Parkinson's disease. The present sequence is rat IGF-I isoform MGF cDNA. MGF is a muscular considered as considered as considered as a considered as considered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

The invention relates to the use of an insulin-like growth factor I (IGF-I) isoform, known as mechano-growth factor (MGF), in the manufacture of a medicament for treating nerve damage in the peripheral nervous system, or for treating nerve damage by localising MGF at the site of damage. The nerve damage may include severing of a nerve. The treatment may be combined with another treatment (such as a polypeptide growth
                                                                                                                   Use of insulin-like growth factor I (IGF-I) isoform known as mechano-growth factor which is encoded by IGF-I exons 4,5,6 and has ability to reduce motoneuron loss in response to nerve avulsion, to
                                                                                                                                                                                                                                                                                                                                                                                    exon

The method is useful for treating neurological disorders, preferably motorneuron disorders. These methods can reduce motoneuron loss by 20% or greater in response to nerve avulsion. This sequence represents cDNA encoding the rat MGF.

The MGF is capable of reducing motoneurone loss by 20% or greater in response to nerve avulsion, and effects motoneurone rescue, preferably adult motoneurone rescue. The MGF polynucleotide and polypeptide are useful in the manufacture of a medicament for the treatment of a neurological disorder, including a disorder of motoneurones and/or neurodegenerative disorder, e.g., amyotrophic lateral sclerosis, spinal muscular atrophy, progressive spinal muscular atrophy, infantile or juvenile muscular atrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    peripheral neuropathies, Alzheimer's disease and Parkinson's disease. The present sequence is rat liver-type IGF-I isoform (L.IGF-I) cDNA. The L.IGF-I protein comprises amino acid sequences encoded by nucleic acid sequence of IGF-I exons 4 and 6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           toxin, motoneurone trauma, a motoneurone lesion or nerve damage, injury that affects motoneurones, motoneurone loss associated wi autosomal or sex-linked muscular dystrophy, diabetic neuropathy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of mechano-growth factor, an isoform of Insulin-like Growth Factor-I, capable of reducing motoneurone loss, in the manufact medicament for the treatment of neurological disorder -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the use of an insulin-like growth factor I CC (IGF-I) isoform, known as mechano-growth factor (MGF), in the manufacture CC of a medicament for treating nerve damage in the peripheral nervous CC system, or for treating nerve damage by localising MGF at the site of CC damage. The nerve damage may include severing of a nerve the treatment CC may be combined with another treatment (such as a polypeptide growth CC factor other than MGF) that prevents or diminishes degeneration of the CC target organ (for example, muscle) which the damaged nerve innervates, CC whereby the treatment of the muscle with MGF or a polynucleotide encoding CC wife prevents or diminishes degeneration. The method is useful for CC treating neurological disorders, preferably motorneuron disorders. These CC evaluation and reduce motonneuron loss by 20% or greater in response to nerve CC evaluation. This sequence represents cDNA encoding the rat insulin-like CC growth factor I liver-type isoform (L.IGF-I) used in experiments on XXX motoneuron loss.

IGF-1 or a modified or biologically active portion can be used for increasing vertebrate muscle mass by intramuscular administration, for e.g. (1) preserving or enhancing muscle strength in aging humans; (11) healing injured muscle more efficiently/rapidly; (111) controlling muscle mass during disease and/or prolonged stays in reduced gravity; (iv) cosmetic body sculpting; and (v) promoting glucose clearance from diabetic muscle tissue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1052 BP;

Use of mechano-growth factor, an isoform of Insulin-like Growth Factor-I, capable of reducing motoneurone loss, in the manufacture medicament for the treatment of neurological disorder -얁

Page 53-54; 66pp; English.

The present invention relates to use of mechano-growth factor (MGF), an Insulin-like Growth Factor-I (IGF-I) isoform in the manufacture of a medicament for the treatment of neurological disorder. The MGF is capable of reducing motoneurone loss by 20% or greater in response to nerve avulsion, and effects motoneurone rescue, preferably adult motoneurone rescue. The MGF polynucleotide and polypaphide are useful in the manufacture of a medicament for the treatment of a neurological disorder including a disorder of motoneurones and/or neurodegenerative disorder, e.g., amystrophic lateral sclerosis, spinal muscular atrophy, progressiv spinal muscular atrophy, infantile or juvenile muscular atrophy, polionyelitis or post polio syndrome, a disorder caused by exposure to a train material teams a manufacture, a disorder caused by exposure to a train material teams. isoform having extracellular (EC) domain, hence also referred as IGF-I-Ec. The MGF protein comprises amino acid sequences encoded by nucleic acid sequence of IGF-I exons 4, 5 and 6 in the reading frame of MGF. toxin, motoneurone trauma, a motoneurone lesion or nerve damage, an injury that affects motoneurones, motoneurone loss associated with aging, autosomal or sex-linked muscular dystrophy, diabetic neuropathy, peripheral neuropathies, Alzheimer's disease and parkinson's disease. The present sequence is rabbit IGF-I isoform MGF-CDNA. MGF-is a muscle MGF is capable progressive disorder,

The nerve damage may include severing of a nerve. The treatment may be combined with another treatment (such as a polypeptide growth factor other than MGF) that prevents or diminishes degeneration of the target organ (for example, muscle) which the damaged nerve innervates, whereby the treatment of the muscle with MGF or a polypuncleotide encoding MGF prevents or diminishes degeneration. The method is useful for treating neurological disorders, preferably motorneuron disorders. These methods can reduce motoneuron loss by 20% or greater in response to nerve avulsion. This sequence represents cDNA encoding the rabbit MGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of insulin-like growth factor I (IGF-I) isoform known as mechano-growth factor which is encoded by IGF-I exons 4,5,6 and ability to reduce motoneuron loss in response to nerve avulsion, treat nerve damage

                                                                                                                                                A use of insulin like growth factor I (IGF-1) has been developed, and is characterised by the presence of the Ec peptide, or a functional equivalent, in the treatment or therapy of a human or animal. The IGF-1 polypeptide can be used to treat muscular disorders, e.g. Duchanne or Becker muscular dystrophy, autosomal dystrophies and related progressive skeletal muscle weakness and wasting, muscle atrophy in ageing humans, spinal cord injury induced muscle atrophy and neuromuscular diseases, and cardiac disorders, e.g. diseases where promotion of cardiac muscle protein synthesis is a beneficial treatment, cardiomyopathies and acute heart failure or insult, specifically myocarditis or myocardial infarction. It can also be used to promote bone fracture healing and maintenance of bone in old age. The present sequence encodes rabbit IGF-1 used in the present specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          toxin, motoneurone trauma, a motoneurone lesson or nerve damage, an injury that affects motoneurones, motoneurone loss associated with aging, autosomal or sex-linked muscular dystrophy, diabetic neuropathy, peripheral neuropathies, Alzheimer's disease and Parkinson's disease. The present sequence is human IGF-I isoform MGF DDA. MGF is a muscle isoform having extracellular (Ec) domain, hence also referred as IGF-I-Ec. The MGF protein comprises amino acid sequences encoded by nucleic acid sequence of IGF-I exons 4, 5 and 6 in the reading frame
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to use of mechano-growth factor (MGF), an Insulin-like Growth Factor-I (IGF-I) isoform in the manufacture of a medicament for the treatment of neurological disorder. The MGF is capable of reducing motoneurone loss by 20% or greater in response to nerve avulsion, and effects motoneurone rescue, preferably adult motoneurone rescue. The MGF polynucleotide and polypeptide are useful in the manufacture of a medicament for the treatment of a neurological disorder, including a disorder of motoneurones and/or neurodegenerative disorder, e.g., amystrophic lateral sclerosis, spinal muscular atrophy, progressive spinal muscular atrophy, infantile or juvenile muscular atrophy, progressive spinal muscular atrophy infantile or juvenile muscular atrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Use of mechano-growth factor, an isoform of Insulin-like Growth Factor-I, capable of reducing motoneurone loss, in the manufacture medicament for the treatment of neurological disorder -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 4; Page 49-50; 66pp; English.

The invention relates to the use of an insulin-like growth factor I (IGF-I) isoform, known as mechano-growth factor (MGF), in the manufacture of a medicament for treating nerve damage in the peripheral nervous system, or for treating nerve damage by localising MGF at the site of damage. The nerve damage may include severing of a nerve. The treatment may be combined with another treatment (such as a polypeptide growth factor other than MGF) that prevents or diminishes degeneration of the target organ (for example, muscle) which the damaged nerve innervates, whereby the treatment of the muscle with MGF or a polynucleotide encoding

The method is useful for treating neurological disorders, preferably motorneuron disorders. These methods can reduce motoneuron loss by 20% or greater in response to nerve avulsion. This sequence represents cDNA encoding the human MGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Local

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A 42 base oligonucleotide corresponding to the DNA sequence encoding amino acids 10 to 23 of mature human IGF-I was synthesized (AAN70437). The radiolabeled 42 mer was then employed to screen for IGF-I containing DNA sequences in a human liver cDNA library. Insulinlike growth factors-1A and -IB cDNAs were isolated from a human cDNA library by using lambdagt 11 (AAN70435, AAN70436). The human IGF-1 genomic gene was isolated and mapped. It encodes at least two preproinsulin-like growth factor-1 proteins. An essentially pure proproinsulin-like growth factor-1 protein comprising the sequence of amino acids shown in Figure six is claimed (AAP70277).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 818 BP; 232 A; 186 C; 187 G; 213 T; 0 other;

Council DNA chip analysis as given in the specification, and comparing (C) where differential expression level in an unactivated (C) where differential expression of Gs is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent (C) that alters the expression of at least one gene in Gs; (2) screening (M3) CC for an agent taspable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of inflammation (GS, where CC an altergic response in a subject, exposure of a altergic response in a subject to a pathogen or sterile inflammatory disease, by contacting the tissue, an altergic response in a subject to a pathogen or sterile inflammatory disease, by contacting tissue, or sterile inflammatory disease, by contacting a tissue having confident on with an agent that modulates the expression of gene(s) confident of the tissue. M1 is useful for detecting GCA, M2 is useful for creening an agent capable of modulating GCA preferably in an inflammation in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile of inflammatory disease, by contacting an agent capable of modulating GCA preferably in an inflammation in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile of inflammatory disease, conditions, injury, renal reperfusion injury, renal creating one of the above conditions. The present of the printed specification, but was obtained in electronic conditions. The present conditions and part segment and not form part to the printed specification and the segment of the printed specification and the segment of the printed sp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; ss; granulocytic cell; DNA chip; bacterial infection; viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatoid arthritis; glomerulonephritis; asthma; thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; crown's disease; ulcerative colitis; periodontal disease;

The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity drug efficacy and drug metabolism.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel method for diagnosing and detecting progression of liver cancer, hepatoceilular carcinoma or metastatic litumour in a patient, and differentiating metastatic liver cancer from hepatoceilular carcinoma in a patient, involving detecting the level of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim
             Human benign prostatic hyperplasia gene #707
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    liver tissue sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 7260 BP; 2330 A; 1415 C; 1240 G; 2275 T; 0 other

CC from patients exhibiting different clinical states of prostate
CC hyperplasia as compared to normal prostate tissue. (I) comprises
CC detecting the expression levels of one or more genes in prostate cells
CC from the subject that are differentially regulated compared to normal
CC prostate cells. (II) comprises preparing a first gene expression profile
CC of BPH cells or BPH-like cell population, exposing the cells to the
CC eight, preparing a second gene expression profile of the agent exposed
CC (I) is useful for diagnosing the first and second gene expression profiles.
CC (I) is useful for diagnosing the onset or progression of BPH. (II) is
CC useful for identifying an agent that modulates the onset or progression
CC of BPH. The methods are useful to present information identifying
CC the expression level in a tissue or cells, by comparing the expression
CC level of genes given in the specification in the tissue or cells to the
CC expression level in a tissue or cells, by comparing the expression
CC level of genes given in the database, and displaying the
CC expression levels of at least one gene in the tissue or cells sample
CC compared to the expression level in BPH. Agents using (II) are useful for
CC treating BPH or prostate cancer. ABK64106-ABK64860 represent human
CC benign prostatic hyperplasia gene sequences of the invention.
                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method of diagnosing (I) the onset or progression of benign prostatic hyperplasia (BPH), or screening (II) for or identifying an agent that modulates the onset or progression of BPH. The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 391-393; 444pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying drugs for and diagnosing benign prostatic hyperplasia, by detecting expression levels of one or more genes in prostate cells from patient that are differentially regulated compared to normal prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Munger WE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              07-AUG-2000;
